GWatch

BETA 0.6.0

CALM IS A FEATURE.

GWatch watches your router, servers, websites and services around the clock, and only speaks up when something actually needs you. Local, private, free to use.

Checks everything

Ping, HTTP/S, DNS, SNMP, certificates, hardware and your own scripts.

Alerts with manners

Cooldowns, maintenance windows and dependency-aware quiet.

Stays home

No cloud account. Nothing phoned home. Signed updates.
